

The Problem of Method (Classic Reprint)

Excerpt from The Problem of Method This book expresses the thought that the characteristic process of consciousness is general method; and that this process made particular by its adjustment to definite subject-matter is special method. In setting forth the idea that the essential process of the self is the essential fact of method it becomes necessary to show that this process or law is manifested in a wide range of activities, as, in feeling, will and knowing; in each stage of knowing, as sense perception, memory, etc.; in the objective world, as in the activity of a plant; in each branch of study; in each lesson, etc. To do this brings about considerable repetition, since the one essential mode of activity is illustrated in each of these realms. No little repetition is involved, also, in considering the psychological activities first in their general aspect and later as to their special processes. The result is a book adapted not to general reading but rather to class room work. The fact that it is especially a working book gives rise to the large amount of working material both in the body of the book and in the Appendix. The neural basis of the various mental activities is scarcely more than referred to. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
