

# Quick Reference Guide to Fire Safety: Occupancy-Based Requirements of the 2006 IBC (International Code Council Series)

The Quick Reference Guide to Fire Safety: Occupancy-Based Requirements of the 2006 International Building Code brings together code requirements for a variety of fire safety topics addressed in the 2006 International Building Code and organizes them into logical groupings based on the 26 identified occupancy classifications. A table is then presented for each occupancy classification, addressing various components such as building size, interior and exterior fire-resistance, and fire protection systems. With this easy-to-use table format and all-inclusive coverage of the most relevant topics, readers will be able to quickly and accurately identify the fundamental fire safety code requirements that apply to a particular project.
