Excerpt from The Significance of Ancient Religions: In Relation to Human Evolution and Brain Development

The title of this work refers especially to the ancient religions of Oriental Paganism. The revelation of God in the figure of Jehovah is only dealt with, in the first place, to emphasise His complete separateness from the deities worshipped in those heathen cults; and in the second place to show that the conception of evolution which the study of these religions unfolds, leads us to the historic proof of the assumptions of Judaism and Christianity. The separateness of Jehovah is not sufficiently emphasised in current works on Comparative Religion; and if I am to develop my theme without prejudice, it is necessary that it should be clearly impressed on the reader, and that he should constantly bear it in mind. For what I propose to show in this work is that these ancient religions embody within themselves a continuous progression of ideas which - studied in the light of all our modern knowledge, and with special reference to their psychological value - completely reveal to us the evolutionary process responsible for the historical progression of humanity. I mean by the historical progression of humanity that perspective of human evolution during the last eight thousand years which embraces all the facts established by history, by anthropology, by the study of Comparative Religion, and by arch?ology. These religions are the expression of the development which has actually taken place in humanity during this period. The evolutionary process revealed in these religions is that of one continuous wave of vital energy acting unceasingly on a pre-existing form of life for many thousands of years, and lifting it to higher levels of capacity and of intelligence.
