

# Principles and Practices of Light Construction

For courses in Architectural Drafting and Light Construction, Residential Construction, and General Carpentry. This complete introduction to residential construction includes coverage of the use and care of hand and power tools, building site preparation, and complete construction from foundation to finished product. A comprehensive text that addresses how residential buildings are assembled, regardless of location, Principles and Practices of Light Construction contains ample photos, up-to-date explanations, and guides to the proper and safe process of construction. Intended for beginners, this guide also will prove useful for advanced construction people, as it provides valuable insights in how to approach construction issues.
