

Social Psychology of Aggression: From Individual Behavior to Social Interaction (Springer Series in Social Psychology)

Dollard, Doob, Miller, and Mowrer formulated their frustration-aggression hypothesis more than forty years ago. Since then the progress in theory of and research on aggression has been very slow. Today we know that there are severe limitations to their hypothesis. The development of alternative approaches has been restricted by the neglect of sociopsychological concepts. Until a few years ago, social psychology was at the back door of aggression research, and even this superficial acquaintance contained too many cognitive ideas to suit many of the influential heroes of the mainstream of research. There are many reasons for the decline of the old paradigms in aggression research, among them the failure to extrapolate from the results of artificial experiments to the realities of our time. This book goes much deeper than other texts in the area; it is also a fresh beginning. It endeavors to reformulate the more traditional topics and strongly emphasizes the social framework of aggression. Accordingly, hostile actions must be explained from a sociopsychological perspective. It has remained for Amélie Mummendey to show the way in which European and American research can be effectively integrated in a comprehensive reader on aggression.
