

At the Mountains of Madness

At the Mountains of Madness is a novella by horror writer H. P. Lovecraft. The story has inadvertently popularized the concept of ancient astronauts, as well as Antarctica's place in the ancient astronaut mythology. The story is told in first-person perspective by the geologist William Dyer, a professor at Miskatonic University. He writes to disclose hitherto unknown and closely kept secrets in the hope that he can deter a planned and much publicized scientific expedition to Antarctica. On a previous expedition there, scholars from Miskatonic University led by Dyer discovered fantastic and horrific ruins and a dangerous secret beyond a range of mountains higher than the Himalayas. A smaller advance group, led by Professor Lake, discovered and crossed the mountains and found the remains of fourteen ancient life forms, completely unknown to science and unidentifiable as either plants or animals.
